

## LEADING TO THE <br> FUTURE OF OPTICS

Optical systems have changed the world.
And they will continue to do so.

TRIOPTICS is significantly involved in this process.
We see ourselves as a solution provider for optical measurement and manufacturing systems and offer our customers the right system for their current and future applications.
wWW.trioptics.com

## Key Features <br> TriAngle Electronic Autocollimators

- Electronic Autocollimators for Optical Angle Measurement
- Measurement of angular displacements with highest accuracy
- Wide range of application specific variants with a modular design
- Effective focal lengths from 100 - 1000 mm
- Different sensors, reticles and light sources available
- Accuracy performance up to 0.05 arcseconds
- OptiAngle Software package for angle measurements

## Principle of an Electronic Autocollimator

The autocollimator combines both optical tools, the collimator and the telescope into one instrument using a single objective lens. Both beam paths are seperated by using a beam splitter. The autocollimator is a very sensitive angle measuring device and is thus used for the precise angular adjustment of optical or machine components. Due to the collimated beam (infinity adjustment) the measurement results are independent from the distance to the object under test.

In an electronic autocollimator the eyepiece is replaced by an electronic camera with discrete sensor pixels (e.g. CCD or CMOS sensor type). It can be of a 2 D frame type allowing angular measurements in two directions, or a 1D line scan sensor for single axis measurements. The digital camera is usually connected to a PC which calculates the measured angle from the image by using image analysis software. The high resolution of electronic autocollimators is due to the evaluation of gray scale levels in the image which allows for sub pixel interpolation of the image position. Depending on the focal length of the objective lens and the stability of the setup, angular resolutions of $1 / 100$ up to $1 / 1000$ arcsecs can be achieved.

## TriAngle Electronic Autocollimator

The TriAngle electronic autocollimators are non-contact optical test tools for the high-precision measurement of angular displacements of specular reflective surfaces and the accurate angular alignment of optical or mechanical parts.

TriAngle autocollimators have a versatile modular design which allows them to be fitted with a wide selection of objective tubes, different sensors, reticles and light sources. With objective tubes of different focal lengths and apertures, the optimum measurement solution regarding angle resolution and measurement range is easily found.

TriAngle autocollimators are available in different application-specific variants:

TriAngle

TriAngle HighSpeed

TriAngle Laser

TriAngle UltraSpec

TriAngle NIR

TriAngle Large Field

TriAngle Focus

TriAngle UV

TriAngle Vacuum

## Productgroup overview

## TriAngle

The standard instrument offering a maximum set of measurement functions.

- LED light source of 525 nm
- High resolution camera
- Focal lengths ranging from 100 mm to 1000 mm

- Accuracy performance of up to 0.2 arcsec

## TriAngle UltraSpec

For highest demands on angle resolution and measurement accuracy.

- LED light source of 525 nm
- High resolution camera with extremely low sensor noise
- Objective lens of minimum distortion
- Thermally and mechanically optimized design
- Focal lengths 300 mm or 500 mm

- Accuracy performance of up to 0.05 arcsec
- Calibrated with PTB angle standards

## TriAngle Focus

For the measurement of slightly spherical surfaces.

- LED light source of 525 nm
- Focusing objective tubes
- Focal lengths ranging from 100 mm to 1000 mm
- Accuracy performance of up to 0.2 arcsec (higher resolution on demand)

## TriAngle HighSpeed

Ideal for vibration measurements or rapidly moving samples.

- Laser illumination of 635 nm allows the measurement of very small and low reflective surfaces
- High bandwith position-sensitive photo detector for angle measurement rates up to 10 kHz
- The position sensitive detector emits almost no heat
- Focal lengths ranging from 100 mm to 1000 mm

## TriAngle NIR

For applications that require measurement at the design wavelengths in the NIR.

- Light source with 1064 nm
(other wavelengths available on request)
- Focal lengths ranging from 100 mm to 1000 mm
- Accuracy performance of up to 0.2 arcsec

## TriAngle UV

For applications that require measurement at the design wavelengths in the UV.

- Light source with 365 nm
(other wavelengths available on request)
- Focal lengths ranging from 100 mm to 1000 mm
- Accuracy performance of up to 0.2 arcsec

## TriAngle Laser

Ideal for the measurement of small optical components, surfaces of low reflectivity or long distance measurements.

- Laser illumination with wavelengths of 635 nm
- Focal lengths ranging from 100 mm to 1000 mm
- Accuracy performance of up to 0.25 arcsec

## TriAngle Large Field

For applications requiring a large measuring range without compromising the measurement accuracy and resolution.

- LED light source of 525 nm
- Specially calibrated large field sensor and optimized imaging optics
- Available with a focal range of 100 mm
- Accuracy +/- 1" within $80 \%$ measuring range

## TriAngle Vacuum

The right choice for special applications in space science and high-energy physics.

- Vaccuum compatible from rough to high vacuum

## Typical TriAngle Application

Alignment of Optical Components

Wedge Angle Measurement
in Reflection / Double Pass

Wobble \& Vibration
Measurement

Prism \& Polygon Measurement

Measurement of
Slightly Curved Surfaces

Measurement of
Flatness / Straightness / Parallelism

Rotary Table Calibration

## Software

## OptiAngle ${ }^{\circledR}$ : The Complete Software Package for Angle Measurement

The OptiAngle ${ }^{\circledR}$ software is a powerful tool covering all aspects of accurate angle measurement with the TriAngle electronic autocollimators in terms of measurement, control and analysis of the angular data. The well organized and modern menuguided user interface assists even the inexperienced operator to perform accurate measurements and to obtain repeatable results. A large set of predefined standard measurement applications is integrated into OptiAngle which cover all established measurement techniques in optical and mechanical industry. In addition, customized measurement routines can be easily developed and embedded either by TRIOPTICS or the experienced end user. All OptiAngle ${ }^{\circledR}$ measurement functions can be further used in other common applications like Lab-View or Visual Basic (Excel).

OptiAngle ${ }^{\circledR}$ software for electronic autocollimators

## Software Features and Functions

The TriAngle software provides many features to simplify the daily use of TriAngle autocollimators whether in the laboratory or in the production environment.

- Real-time camera display
- Numerical and graphical display of measurement data
- Optional full screen camera window (visual alignment mode)
- User defined graphical scales or indicators inside the camera window
- Simultaneous measurement with multiple (up to 12) autocollimators
- Simultaneous measurement of multiple surface reflections (up to 12)
- Comprehensive data reporting functions
- ASCII (CSV) data export
- Selectable angle units for screen display and measurement certificate
- Software remote control by host computer via RS232 interface and TCP /IP
- Plug-in mechanism for customized measurement programs
- User defined measurement certificate layout
- Demo programming examples for Excel, LabView, VBA
- Multiple camera interface technology for USB, IEEE 1394 (Firewire), Gigabit Ethernet, CameraLink or Analog Video Camera
- Production mode for batch/lot sample identification and result reporting

TriAngle modular software concept

## Accessories

In addition to the TriAngle electronic autocollimator series, TRIOPTICS offers a large range of opto-mechanical accessories, often required for certain standard applications.

## Holders

## Clamp Fixture

Clamp fixture

## Stands

- Manual Stand
- 2-axes vertical mount D38, D57
- Fixture for wedge measurement
- Tripod
$\qquad$

Adjustable holder
Alignment Tools

## Laser Prealignment Tool

## View Finder Prism

- View Finder Prism

Laser PreAlignment Tool

## Mirrors

## Mirrors

- Mirror in mount
- Adjustable mirrors

Mirror in mount

## Redirecting Mirrors

- $45^{\circ}$ redirecting mirror for D38, D57, D115
- Penta Prism
$\qquad$

Calibration Tools
$90^{\circ}$ Reference Prism in Mount

## Polygons

- Polygon 12 sides in holder

## Calibration Wedges

Polygon

## Product overview TriAngle
