

## µPhase® VERTICAL

The universal interferometer system for production, workshop and laboratory.

## General features:

- Vertical setup with small footprint
- For measuring flat and spherical samples up to  $\infty$  = 50mm
- Integrated automatic radius measurement
- Sample support on tilt and X-Y translation table
- Optional with tray for measuring a multiple number of samples at once
- Transmission measurement possible

If you need more information don't hesitate to contact us at <a href="mailto:support@trioptics-berlin.com">support@trioptics-berlin.com</a>.

(Picture above shows the version with µLens PLANO 50 for a single sample measurement.)
